Eligible But Not Enrolled Data

There is a monthly report that lists individuals who are either receiving Medical Assistance or SNAP and are potentially eligible for the other program. This report can be used by eligibility workers to outreach to clients to make sure they are receiving all the benefits that they may be eligible for.

1
TAB 1
Aggregate data, or a data summary, including county, total number of clients and percentage of clients enrolled in one program who may be eligible for the other program.
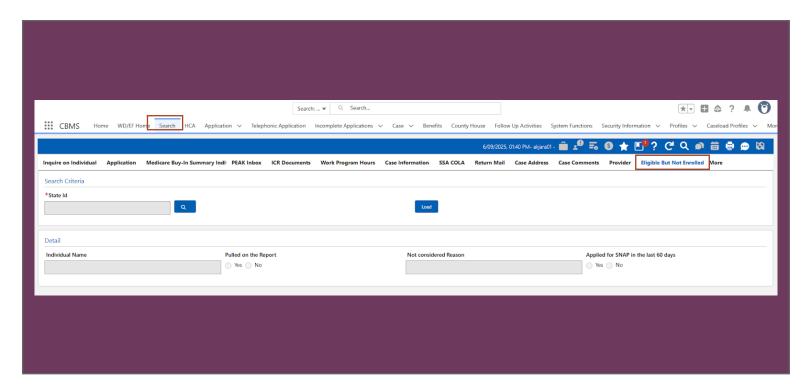

2
TAB 2
Detailed report listing the clients who are eligible for Medical Assistance and are POTENTIALLY eligible for SNAP benefits.

3
TAB 3
Detailed report listing the clients who are eligible for SNAP benefits and are POTENTIALLY eligible for Medical Assistance.

4
TAB 4
Definitions of the column headers.

Summary:

Eligibility workers have access to a detailed Cognos report with 4 tabs and a screen on the CBMS Search page. Many clients may not be aware of their potential eligibility for either Medical Assistance or SNAP benefits. This report gives information to the eligibility worker so that they can better meet the needs of their clients.

This monthly report is automated, so a county will have access to the report without having to request it from the state. The report can be easily filtered by county. Remember, this report will use CBMS logic to determine if a client MIGHT be eligible for another program based upon the information entered for that client.

The Eligible But Not Enrolled page is under the Search tab in CBMS and allows workers to find information for their clients quickly, helping the worker identify if the client could **potentially** be eligible for Medical Assistance or SNAP benefits based upon the information entered. Please note that not everyone on this report will be eligible for the other program.

Potential eligibility is determined by several factors, including income, HH size, benefit category, and other factors.

This report does not guarantee a member's eligibility.
