Project 14741

CBMS Run Back Date

June 2021

Summary

This project will provide users with the Override EDBC Run Month user type with the appropriate access to run a date back in CBMS instead of having to alter a date on a different screen to be able to perform the action. This will save time and be better for the audit trails.

Override Run Month Field

A new screen '**Run EDBC for Previous Months**' will be added beside the **Run EDBC** screen.

1) This screen will have **Override Date** and **Override Reason** fields and will be enabled when the user has User type Override EDBC Run Month.
3) **Override Date** will be mandatory when **Override reason** is entered.
4) EDBC will be called with the new date and will run from that Date forward.
5) The date selected in the **Override Date** field will add a record in the **Case Data Changes list** and will populate the **Earliest EDBC Begin Date** and the **Default EDBC Begin Date** fields.
