Error conditions caused by invalid or missing data.

- 101 CAN invalid or missing
- 102 SSN invalid or missing
- 103 Both CAN and SSN are invalid
- 110 CAN unverified
- 120 SSN unverified
- 201 Surname missing
- 202 Given name missing
- 300 Date of birth not possible, or letters invalid or missing
- 400 Non-alpha entry was entered in the Sex field
- 500 Input State Code requested a query for which they have not been approved. No verification or other action will be taken
- 600 SSN not verified, other reason
- Blank Input data is valid

Indicates SSN verification or the reason for non-verification.

Blank Records failing initial edit checks and not making it as far as the verification process

V SSN is verified. Not returned for SCHIP or PCIP requests

X SSN is verified, NUMIDENT indicates individual is deceased. The Date of Death on the NUMIDENT will be displayed in the Verified SSN Data field (positions 109-153 of the Type 1 response) for those records where source of Death data is any source other than a State that restricts redisclosure of the State reported Date of Death. Date of Death is not returned for SOLQ transactions. Not returned for SCHIP or PCIP requests.

1 SSN not found on NUMIDENT

3 Surname matched, but DOB did not match NUMIDENT. The DOB on the NUMIDENT will be displayed in the Verified SSN Data field (positions 109-153 of the Type I response)

5 Surname or given name does not match NUMIDENT (e.g., SSN submitted for John Smith belongs to Pam Jones); DOB was not checked.

F SSN is verified (surname ignored because no match on surname +/- 1 letter difference). Surname provided does not match database for that SSN, but month/year of Date of Birth, first 3 letters of First Name and the Middle Initial match. Picks up cases where person has changed their surname (e.g. marriages, adoptions).

M SSN verified via MBR or SSR rather than NUMIDENT (overlays value of '1')

P SSN verified via MBR or SSR rather than NUMIDENT (overlays value of '3')

R SSN verified via MBR or SSR rather than NUMIDENT (overlays value of '5')

Z Verification code for records in which State submitted a CAN (claim account number) instead of an SSN. SSA found the CAN on the MBR, but did not verify the SSN with the NUMIDENT

\* The input SSN was not verified. SSA located and verified the SSN returned in the Verified SSN Data field (positions 109-153 of the Type I response). The SSN on the response was located by swapping every number in the input SSN with every other number; this resolves transcription errors.

& Multiple SSNs are provided in Verified SSN data field, up to five. This response will immediately follow a = response with an alpha verification code in about 1% of the cases. The multiple SSNs are ones which were previously issued to individuals. Benefits may or may not have been paid on the multiple SSNs. This code is not returned for SOLQ transactions.

. Same as Blank

The input query data does not match the identifying data on the queried record. This data is provided for informational purposes only on verified queries; it does not affect the response provided.
